

If your water has been sitting in the pipes more than 18 hours, the more lead it may contain. Before drinking, let the water run for at least 30 seconds or until the temperature changes.

5. If you're concerned about construction disturbing your service lines

Contact your water system to find out about any construction or maintenance work that could disturb your service lines. Construction may cause more lead to be released from a lead service line or galvanized service line if lead is present.

6. If you want your water tested

Contact your water system to learn about your options with having your water tested for lead.

7. Get your child tested to determine lead levels in their blood.

A family doctor, pediatrician, or your County Health Department can perform a childhood blood lead level test and provide information about the health effects of lead. KDHE can also provide information about how you can have your child's blood tested for lead.

8. Replacing lead service lines or galvanized requiring replacement service lines.

If you replace your service lines, make sure to use filters for 6 months after service line replacement. For questions on filters, contact your water system.

What is being done?

[Describe corrective action.] Notices were printed and mailed to each customer on October 24, 2025. The notice of violation and Trifold were posted to our website allenrwd8.my rural water.com

We anticipate resolving the problem within [estimated time frame] 7 days

For more information, please contact Name: CINDY JARO
2060 IDAHO RD PO BOX 234 HUMBOLDT, KS 66748
